SEO Audit Pro — User Manual

Oct 21, 2026 · @Naweed Mirza

1. What SEO Audit Pro does

SEO Audit Pro helps an agency find businesses, check their websites, and contact them with proof of what to fix. It runs on Windows and works for one person or a whole team.

With it you can:

- **Keep a lead bank.** Import lists of businesses (for example scraped from Google Maps), thousands at a time. Rows with no website and repeats are removed for you.
- **Audit websites.** The app reads up to 50 pages of a site and scores it out of 100 across ten areas, such as technical SEO, content, speed, mobile and security.
- **Make reports.** A simple client report and a detailed technical report, as Word, PDF or a web page.
- **Reach out.** Write an email from the audit findings, attach the report and send it.
- **Work as a team.** Managers, Team Leads and Agents each see their own work, with chat and notifications.

Words used in this manual

Word	What it means
Lead	A business you might work with, with its website
Audit	A check of one website; it ends with a score and a list of issues
Niche	The type of business, for example Dentists or Plumbers
Area	Where the business is, for example Chicago IL
Queue	The waiting line of audits; a few run at a time
Workspace	Everything your team shares: leads, audits, reports, people
Manager, Team Lead, Agent	The three roles; see section 3

2. Getting started

You only need the zip file. There is nothing else to install: the first time you open the app, it sets up its own database on your computer.

What you need

- Windows 10 or Windows 11 (64-bit)
- 4 GB of memory or more
- About 500 MB of free disk space, plus room for your data
- An internet connection (audits read websites live)
- Optional: Microsoft Word or LibreOffice, if you want PDF reports. Without them you still get Word (.docx) and web page reports.

First run, step by step

1. **Unzip** `SEO-Audit-Pro-Portable.zip` into a folder you will keep, for example `Documents\SEO Audit Pro`. Do not run the app from inside the zip.
2. **Open** the folder and double-click `SEOAuditPro.exe`. Tip: right-click it and choose *Send to › Desktop (create shortcut)*.

3. If Windows says **"Windows protected your PC"**, click **More info**, then **Run anyway**. Windows shows this for new apps that are not from the Microsoft Store.
4. On the **Welcome** screen, choose how to use the app:
   - **On this computer** (recommended): everything runs and is saved on this PC.
   - **Connect to a team server**: someone on your team already runs SEO Audit Pro. Type the address they gave you, then **Test and save**.
5. If you chose *On this computer*, wait a few seconds. The first start creates the database.
6. **Create the Manager account**: your name, email and a password. The password needs at least 10 characters, upper- and lower-case letters, and a number.
7. You are in. Next, add your teams and people (section 5) and import your first leads (section 6).

Opening the app next time

Double-click `SEOAuditPro.exe`. The app starts its server and signs you in. If you ticked **Keep me signed in**, you go straight to your dashboard for 14 days.

Only one copy of the app opens at a time. Opening it again just brings the open window to the front.

Where your data is kept

In *On this computer* mode, everything is saved in `C:\Users\<you>\AppData\Local\SEO Audit Pro\data`. The Manager can open it from **Settings › This computer › Open folder**.

People who join a team server

New people do not create an account. The Manager adds them and gives them a temporary password. At their first sign-in, the app asks them to choose their own password.

3. The three roles

Every person has one role. The **Manager** runs the whole workspace, a **Team Lead** runs one team, and an **Agent** works on the leads given to them. The app checks this on every action, so people never see work that is not theirs.

What you can do	Manager	Team Lead	Agent
See leads	All leads	Their team's leads	Only leads assigned to them
Import lead files	Yes, for any team	Yes, for their team	No
Assign or split leads	To anyone	Within their team	No
Add a lead by hand	Yes	Yes	Yes (it is assigned to them)
Run audits	On any lead	On their team's leads	On their own leads
Leads per bulk audit	Up to 500	Up to 100	Up to 100
Send emails	Yes	Yes	Yes, for their own leads
Export leads to CSV	Whole bank	Their team	No
Teams and people	Create, edit, deactivate	See their team	No
Settings (email, audits, PageSpeed, sharing)	Yes	No	No
Activity log (who did what)	Yes	No	No
Chat with	Everyone	Managers and their team	Managers and their team

A team has one Team Lead. A Manager does not belong to a team.

4. Finding your way around

The screen has three parts: the **sidebar** on the left, the **top bar**, and the page in the middle.

Part	What it does
Sidebar	Opens each page. You only see the pages your role can use. The button at the bottom (or **Ctrl+B**) makes it narrow.
Back arrow	Goes back to the page you were on, with the same filters and page number. **Alt+Left** and the back button on your mouse do the same.
Search (**Ctrl+K**)	Finds leads, audits, people and teams you are allowed to see.
Connection light	Green **Connected**, amber **Connecting**, red **Offline**. When it is red, the app keeps trying on its own.
Bell	Your latest notifications. The red number is how many you have not read.
Your picture	Opens your **Profile** (name, photo, password) and **Sign out**.

Tables

- Click a column title to sort by it. Click again to reverse.
- Double-click a row to open it. Right-click a row, or click its **…** button, for more actions.
- At the bottom: rows per page, and a page box where you can type a page number to jump to it.
- On smaller screens, less important columns hide themselves so the main ones stay readable.

Loading

Grey moving blocks mean a page is loading. Pages you opened before show at once and refresh in the background, so going back and forth is quick.

5. Manager guide

As Manager you set up the workspace once: teams, people and settings. After that, your daily work is importing leads and sharing them out (section 10).

Teams

1. Open **Teams** and click **New team**. Give it a name, for example *Sales North*.
2. Click a team to see its people, leads and audits.
3. You can rename a team at any time. You can only delete a team that has no people, leads or history.

People

1. Open **Users** and click **Add user**.
2. Enter their name and email, pick a **role** and a **team**. Agents and Team Leads must be in a team.
3. The app shows a **temporary password once**. Copy it and give it to the person privately.
4. At their first sign-in they must choose their own password.

Other actions on a person (click their row):

- **Edit**: change name, role or team.
- **Reset password**: makes a new temporary password. They are signed out everywhere.
- **Deactivate**: they can no longer sign in. Their leads go back to their team's pool, and the change is kept in each lead's history. **Reactivate** brings them back.

The workspace always keeps at least one active Manager.

Settings

Open **Settings**. Every change here is saved in the activity log.

Email delivery (SMTP). Needed to send outreach emails and "forgot password" codes.

1. Fill in the server, port, username, password and the sender name and address. Your email provider gives you these.
2. For Gmail, click **Use Gmail settings**. Gmail needs an *App password*, not your normal password: Google Account › Security › 2-Step Verification › App passwords.
3. Click **Test connection**, then **Save SMTP settings**. The password is stored encrypted and is never shown again.

Audit defaults.

- *Pages to crawl*: how many pages each audit reads, 1 to 500. 50 is a good balance of speed and detail.
- *PageSpeed Insights*: mobile and desktop, or mobile only (faster).

- *Audits at the same time*: 2 is right for a computer with 4 GB of memory. Use 3 or 4 only with 8 GB or more.

Google PageSpeed Insights key. Speed scores come from Google. Without your own free key, Google often says it is busy and the speed part is skipped. To get a key: open console.cloud.google.com, create a project, turn on *PageSpeed Insights API*, then create an API key under *Credentials*. Paste it and click **Save key**.

This computer (only in *On this computer* mode).

- *Data folder*: where everything is saved. **Open folder** shows it.
- *Let other computers on this network use this workspace*: turn this on so your team can connect from their own computers on the same network. The app shows the address they should type on their Welcome screen. If Windows asks about the firewall, allow access on **private networks**. Your computer must stay on with the app open.

Activity log

Audit Logs lists every important action: sign-ins, leads added or assigned, imports, audits, emails, settings changes. Filter by action, person or date, and click a row for details. Nobody can edit or delete these entries.

6. The Lead Bank

The Lead Bank holds every business you might work with. Managers and Team Leads see it as **Lead Bank**; Agents see **My Leads**, which only shows their own leads.

Importing scraped files

Each file should hold **one niche in one area**, for example all dentists in Chicago. You can import many files at once.

1. Click **Import files**.
2. Drag your files into the window, or click **Add files…**. CSV, TSV, TXT and Excel (.xlsx) files up to 200 MB each work. Old Excel files (.xls) must first be saved as .xlsx.
3. For each file the app guesses the **niche** and **area** from its name. For example *Dentists in Chicago IL.csv* becomes *Dentists* and *Chicago IL*. Fix them if they are wrong.
4. The app finds the **website column** by itself. If a file says *Choose the website column*, pick the right column from the list.
5. Optional: choose a **team** or **person** to give all the imported leads to.

6. Click **Import**. You can keep working; the import runs in the background and you get a notification when it is done.

The app removes these rows and tells you how many, file by file:

Removed because	Example
No website	The website cell is empty
Website not usable	Only a Google Maps or Facebook link, or not a real web address
Duplicate within file	The same website or phone appears twice in the same file
Already in the lead bank	The website or phone number is already saved from an earlier file

The Imports tab

Lead Bank › Imports lists every file with its rows read, leads added, duplicates and rows without a website. Click a file's **…** button to:

- **View leads**: show only the leads that came from this file.
- **See removed rows**: every removed row, with its reason.
- **Download removed rows**: the same list as a CSV file.

Finding leads

- **Niches & areas** (left panel): every niche with its areas and the number of leads. Click a niche, then an area. Type in its box to find one fast.
- **Quick views** above the table: All, Unassigned, Not audited, Audited, Contacted, Not contacted.
- **Filters**: search (company, website or contact), status, team and person.
- The summary line shows how many leads match and how many are unassigned, audited and contacted. **Clear filters** resets everything.

Selecting many leads

1. Tick the boxes on the left of the rows you want. The box in the header ticks the whole page.

2. To act on **every** lead that matches your filters, on all pages, click **Select all N matching** in the dark bar.
3. Then choose an action in the dark bar: **Audit**, **Assign**, **Email** (up to 200 ticked leads), **Archive** or **Restore**.

Assigning and splitting

Click **Assign**, then pick a team and a person. To share leads fairly, choose a team and tick **Split evenly across the team's agents**. Add a reason if you like. Every change is kept in the lead's history (open the lead › **Activity**).

Adding one lead by hand

Click **Add lead**. Company and website are needed; niche, area, contact, email, phone, country and address are optional. A website that is already in the bank is refused. If the same email, phone or company name exists, the app asks you to confirm first.

The lead page

Double-click a lead to open it. You see its details on the right (including Google rating and a Google Maps link when imported) and five tabs: **Overview**, **Audits**, **Reports**, **Outreach** and **Activity**. The buttons at the top let you **Edit**, **Compose email** and **Start audit**. The **…** menu has Assign and Archive.

Lead status

Status	Set by
New	A new lead with nobody assigned
Assigned	Given to a person
Audited	The app, when an audit finishes
Contacted	The app, when an email is sent
Qualified, Won, Lost	You, with **Edit**
Archived	**Archive**; hidden until restored

Export and archive

- **Export** saves the leads that match your current filters as a CSV file.
- **Archive** hides leads from the bank; they cannot be audited or emailed. To bring them back, set the status filter to *Archived*, tick them and click **Restore**.

7. Audits

An audit reads a website and gives it a score out of 100, with a list of what to fix. A 50-page audit usually takes about a minute; slow or very large sites take longer.

Auditing one lead

1. Open the lead and click **Start audit**. Or open **Audits**, click **Start audit** and pick the lead.
2. The audit joins the queue, ahead of any bulk audits, and opens so you can watch it.
3. You see each step, the pages read and the pages found. Click **Cancel** to stop it.
4. When it finishes you get a notification and the results open.

Auditing many leads at once

1. In the Lead Bank, tick the leads (or **Select all N matching**) and click **Audit**.
2. A review window shows what will happen:
   - how many leads will be audited
   - which are skipped: audited in the last 30 days, already waiting or running, or archived
   - any leads over the limit (100 per run, 500 for Managers), which you can audit in a later run
   - roughly how long it will take
3. To audit the recently audited leads again, tick **Also re-audit**.
4. Click **Audit N leads**. The app opens **Audits › Queue**. You get one notification when the whole batch is done.

The queue

Audits wait in one shared line and run a few at a time (2 by default). A single audit started from a lead always goes first. Bulk audits take turns between people, so one person's 100 audits never block a teammate.

The **Queue** tab shows:

- **Running now**, **Waiting**, the **average audit time** and when the queue will be empty
- **Bulk audits**: each batch with its progress and time left. Use its **…** button to see its audits or to **Cancel** it. Finished audits are kept.
- **Running and waiting**: every audit in the line, with how many are ahead of it

In *On this computer* mode, audits only run while the app is open. If you close it, unfinished audits carry on the next time you open it.

Reading the results

Tab	What you find there
Overview	The score and grade, a score for each area, how many issues by importance, and any checks that could not run
Issues	Every problem found, how serious it is, where it is, and how to fix it. Mark an issue **Resolved** when it is fixed.
Security	Website security checks, such as HTTPS, headers and exposed files
Recommendations	The issues in the order to work on them
Pages	Every page the audit read, with its title and main checks
Reports	The report files for this audit

Numbers marked *Estimated*, such as domain authority and monthly visits, are the app's own estimates from what it read, not data from Google or other tools.

Reports

- **Client report**: short and simple, written for the business owner.
- **Technical report**: every finding in detail, for whoever fixes the site.
- **Word (.docx)** files are ready as soon as the audit finishes.

- **PDF** files are made the first time someone opens or emails them. This takes a few seconds and needs Microsoft Word or LibreOffice on the computer that runs the server. Until then the list says *Made when first opened*.
- **View client report** opens the report as a web page you can save and send.
- **Export audit data (JSON)** saves all the raw results.

Open **Reports** to see every report you can access. Right-click a row to open it, download it or go to its audit. If a file goes missing, open the audit's **Reports** tab and click **Regenerate reports**.

8. Outreach

Outreach turns an audit into an email to the business owner. Emails are sent from your agency's own email account, which the Manager sets up once (section 5). Until then you can write and save drafts, and a yellow notice says sending is not set up.

Writing an email

1. Open the lead and click **Compose email**. Or open **Outreach › Compose** and click **Change…** to pick a lead.
2. Click **Generate from audit**. The app writes a draft from the lead's latest audit: the score and the most important real findings. This button works once the lead has an audit.
3. Read it and change anything you like. It is always your email.
4. Fill in **To**, the person's email address.
5. Tick the reports to attach, or click **Attach file…** (PDF, DOCX, PNG or JPG; up to 5 files, 10 MB each).
6. Click **Save draft** to finish later, or **Send**.

Sent emails go out one by one with a short pause, so mail servers trust them. When one is sent, the lead's status becomes *Contacted*.

Drafts and sent emails

Outreach › Drafts & sent lists your emails: *Draft*, *Queued*, *Sending*, *Sent* or *Failed*. Open a failed email to see why, fix the problem and send it again. Managers see every email under **Activity**.

Emailing many leads

1. Tick up to 200 leads in the Lead Bank and click **Email**. Or use **Outreach › Bulk outreach**.
2. The preview shows who will get an email and who is skipped, and why:
   - no valid email address
   - no finished audit yet
   - already emailed in the last 14 days
   - status Won, Lost or Archived
3. Each email is written from that lead's own audit. Check the sample, then confirm the number to send.

The app sends at most 500 emails a day. It does not track opens or clicks.

9. Chat and notifications

Chat

- Every team has its own **team channel**. Managers can join every team channel.
- **Direct messages** go to one person. Agents and Team Leads can message Managers and people in their own team.
- Hover a message to **reply**, **react**, **edit** or **delete** it. You can only edit or delete your own messages.
- Click the paperclip to **attach a file**. Use the search box to find old messages.
- A green dot shows who is online, and you see when someone is typing.

Notifications

The bell in the top bar and the **Notifications** page tell you when:

- a lead is assigned to you
- your audit finishes or fails, or its report is ready
- a bulk audit or a lead import finishes
- your email is sent or fails
- someone sends you a message

Click a notification to open what it is about. **Mark all as read** clears the red number.

10. A normal day, role by role

Each role has a short routine. The work flows down: the Manager brings leads in and shares them out, Team Leads share them inside their team, and Agents audit and contact.

Manager

1. **Import** today's scraped files (Lead Bank › Import files).
2. Check the **Imports** tab: how many leads were added, and why rows were removed.
3. Click a niche and area in the left panel, then **Select all matching** › **Assign** to the right team. Tick *Split evenly* to share between Agents at once.
4. Optional: **Audit** a whole niche and area yourself (up to 500 leads per run).
5. Look at the **Dashboard**: new leads, audits done this week, average score, emails sent.
6. Now and then, check **Audit Logs** and **Teams** to see who is doing what.

Team Lead

1. Open **Lead Bank** and choose the **Unassigned** quick view. These are your team's leads with nobody on them yet.
2. Select them and **Assign** › *Split evenly across the team's agents*.
3. Queue audits for your team if your Agents are busy (up to 100 leads per run).
4. Open **Team** to see each person's leads, audits and emails.
5. Answer questions in your team's **Chat** channel.

Agent

1. Open **My Leads** and choose **Not audited**.
2. Tick the leads to work on today and click **Audit** (up to 100 at a time). Carry on with other work while they run.
3. When an audit finishes, open it and read the **Overview** and **Issues**.
4. Click **Compose email** › **Generate from audit**, fill in the owner's email, attach the client report and **Send**.
5. When a lead answers, open it and click **Edit** to set its status to *Qualified*, *Won* or *Lost*. Add notes for your team.

11. When something goes wrong

Most problems come with a clear message. Find yours below. If an action fails, nothing is half-done: you can simply try again.

Starting and signing in

You see	What it means	What to do
Windows protected your PC	Windows does not know this new app yet	Click **More info** › **Run anyway**
The audit server stopped while starting / did not start	The app could not start its server	Close the app and open it again. If it repeats, your antivirus may be blocking `SEOAuditPro.exe`; allow it. The message names a log file with the details.
Server unavailable, or a red **Offline** light	The app cannot reach the server	*On this computer*: the app restarts its server by itself within a few seconds. *Team server*: check your internet or network, or ask whoever runs the server. Click **Retry**.
The email or password is incorrect.	Wrong email or password	Check both. Use **Forgot password?** (needs email set up) or ask your Manager for a new temporary password.
Too many failed sign-in attempts	5 wrong passwords in a row	Wait 15 minutes, or reset your password
This account has been deactivated	Your Manager turned your account off	Ask your Manager
Your saved session has expired	You were signed in for more than 14 days, or your password changed	Sign in again
Choose a new password before continuing	You signed in with a temporary password	Pick your own password

Leads and imports

You see	What it means	What to do
Only .csv, .tsv and .xlsx files can be imported	The file type is not supported	Save the file as CSV or .xlsx. Old .xls files must be saved again as .xlsx.
Choose the website column	The app could not tell which column holds websites	Pick it from the list next to the file
Many rows removed	Rows had no website, or the leads already existed	Open **Imports**, click the file's **…** › *See removed rows* to see each reason
A lead for this website already exists	The website is already in the bank	Open the existing lead instead (the app offers to)
Possible duplicate	Another lead has the same email, phone or company	Check it; confirm if it really is a different business
This lead was changed by someone else	Someone saved the same lead a moment before you	Close the window, open the lead again and redo your change
The selection changed since you reviewed it	Leads were added or changed while the window was open	Look at the new numbers and confirm again

Audits and reports

You see	What it means	What to do
An audit is already running for this lead	It is already waiting or running	The app opens the running audit
The domain could not be resolved	The website address is wrong, or the site is down	Check the website (open the lead › **Edit**) and audit again
This address points to a private or internal network	The website points to a home or office network	Only public websites can be audited

You see	What it means	What to do
The audit could not be completed because of an unexpected error	Something went wrong while reading the site	Try again later. If it keeps failing, the site may be blocking audits.
Some checks could not run … PageSpeed … quota (HTTP 429)	Google refused the speed test	The Manager adds a free PageSpeed key in **Settings** (section 5). The rest of the audit is fine.
Audit stays on *Waiting in the queue*	Other audits are ahead of it	Open **Audits › Queue** to see its place in line and the time left
None of the selected leads need an audit right now	All of them were audited recently, are running, or are archived	Tick *Also re-audit* in the review window to audit them again
You already have 300 audits waiting	You hit the waiting limit (2,000 for Managers)	Wait for some to finish, or cancel a bulk audit
PDF rendering is not available on this server	No Word or LibreOffice on the server computer	Use the Word (.docx) or web page report, or install LibreOffice (free)
Other PDFs are being created right now	PDFs are made one at a time	Try again in a minute

Email

You see	What it means	What to do
Email sending is not configured yet	No email account is set up	The Manager fills in **Settings › Email delivery**
Test connection fails	Wrong server, port or password	Check the details with your email provider. Gmail needs an *App password*.
An email shows **Failed**	The mail server refused it	Open it to read why, fix the problem, then send it again

You see	What it means	What to do
Generate from audit is greyed out	The lead has no finished audit	Audit the lead first

Sharing on the network

You see	What it means	What to do
Windows Firewall asks about SEOAuditPro	Sharing was turned on	Allow access on **private networks**
Others cannot connect	Something is in the way	Check that both computers are on the same network, the main computer is on with the app open, and sharing is on. Type the exact address shown in **Settings › This computer**.

Log files

If you need help, these files show what happened:

- Server: `AppData\Local\SEO Audit Pro\data\logs\server.log`
- App: `AppData\Local\SEO Audit Pro\logs\client.log`

They never contain passwords.

12. Limits and good to know

These limits keep the app fast and safe on an ordinary computer.

Area	Limit
Computer	Windows 10 or 11, 64-bit. There is no Mac or phone version.
On this computer mode	Audits run and others can connect only while the app is open and the computer is awake

Area	Limit
Pages per audit	1 to 500 (50 by default). Very large pages are read up to 3 MB.
Audits at the same time	2 by default; up to 4 with 8 GB of memory or more
Bulk audit	100 leads per run (500 for Managers); 300 audits waiting per person (2,000 for Managers)
Re-audits	Leads audited in the last 30 days are skipped unless you tick *Also re-audit*
Import files	CSV, TSV, TXT or .xlsx; up to 200 MB each; one niche in one area per file
Bulk email	200 leads at a time, 500 emails a day, at most one email per lead every 14 days
Attachments	Up to 5 files, 10 MB each (PDF, DOCX, PNG, JPG)
PDF reports	Need Microsoft Word or LibreOffice on the computer that runs the server
Speed scores	Come from Google; need a PageSpeed key for reliable results
Estimates	Domain authority and monthly visits are the app's own estimates
Email tracking	Opens and clicks are not tracked
Forgot password	Needs email delivery set up; otherwise the Manager resets the password

Some websites block automatic visitors. Their audits may read fewer pages or fail; the audit says so instead of guessing.

13. Backups, moving and removing

In *On this computer* mode, one folder holds all your work: `AppData\Local\SEO Audit Pro\data`. Keep it safe and you keep everything.

Making a backup

1. Close SEO Audit Pro.
2. Copy the whole `data` folder to a USB drive or cloud storage.
3. Do this regularly, for example every Friday.

The folder also holds the app's secret keys. Always copy the folder whole, or saved email passwords can no longer be read.

Moving to a new computer

1. On the old computer, close the app and copy the `data` folder.
2. On the new computer, unzip the app, but do not open it yet.
3. Paste the folder to `C:\Users\<you>\AppData\Local\SEO Audit Pro\data`.
4. Open the app, choose **On this computer**, and sign in with your usual account.

Giving the app to friends

Send them the zip file. Each copy is separate: your friend gets an empty workspace and creates their own Manager account. Your leads stay on your computer.

To work **together** on the same leads instead, turn on **Settings › This computer › Let other computers on this network use this workspace**. Then add your friends as people, and they choose *Connect to a team server* with the address the app shows. They must be on the same network as you.

Updating to a new version

Close the app, delete the old app folder and unzip the new one in its place. Your data folder is not touched, and the database is updated by itself the first time the new version opens.

Removing the app

1. Delete the app folder.
2. To delete your data too, delete `AppData\Local\SEO Audit Pro`.
3. If you used *Keep me signed in*, open **Windows Credential Manager** and remove the entry named *SEO Audit Pro*.
